## **Saving Spaceship Earth**

### **The Problem: Eliminating Toxic Oil Spills**

While major oil tanker accidents get most of the media attention, most of the oil in the oceans comes not from the major tanker accidents, but from routine tanker operations, whereby seawater is used to wash out the tankers after the oil has been off-loaded.

### **The Solution: Hydrogen Tankers**

The image above is a state-of-the-art liquid hydrogen tanker that was developed in the 1960's by General Dynamics. Unlike oil and gasoline, hydrogen is completely non-toxic and pollution-free. As such, if the Exxon Valdez had been transporting hydrogen instead of oil, none of the environmental contamination would have occurred.

## **Eliminating Toxic Oil Spills**

Page 2 of 2

It is why with Harry Braun's Phoenix Project plan to transform oil companies into solar hydrogen companies, some of the most significant benefits will be for the oil and other energy companies who will be able to provide "sustainable prosperity without pollution" for their customers, their shareholders, and the other passengers aboard *Spaceship Earth*.
